

Store Sales Analysis – Business Insights

Executive Summary

This dashboard analyzes store sales, product performance, outlet performance, and customer buying patterns. The objective is to identify high-performing products, profitable outlet types, and opportunities to improve business performance.

Key Business Insights

1. Sales Performance

- The store generated **Total Sales of 661.98K**, indicating strong overall business performance.
- Sales are concentrated in a few high-performing item categories.

2. Product Performance

- Some item types contribute significantly more sales than others.
- High-demand products should be stocked regularly to avoid shortages.
- Low-performing products should be reviewed for pricing or promotional strategies.

3. Outlet Performance

- Medium and Large outlet sizes contribute the majority of total sales.
- Certain outlet types perform better than others and generate higher revenue.
- Outlets with lower sales require performance improvement strategies.

4. Item Visibility Analysis

- Products with higher visibility generally achieve better sales.
- Increasing visibility of low-performing products may improve their sales performance.

5. Outlet Establishment Trend

- Outlet performance varies across establishment years.
- Older and well-established outlets show consistent business performance.

6. Fat Content Analysis

- Regular fat content products contribute more to total sales than low-fat products.

- Customer preference is higher for regular fat products.

7. Outlet Location Analysis

- Sales differ across outlet locations.
- High-performing locations should receive higher inventory allocation and marketing support.

8. Tier Analysis

- Sales performance varies among Tier 1, Tier 2, and Tier 3 locations.
- Business strategies should be customized for each tier to maximize profitability.

Recommendations

- Increase inventory for high-selling item categories.
- Improve marketing for low-performing products.
- Focus expansion on high-performing outlet types.
- Increase product visibility through better shelf placement and promotions.
- Optimize inventory distribution across outlet locations.
- Analyze low-performing outlets and implement improvement strategies.
- Plan seasonal promotions based on customer purchasing patterns.

Conclusion

The dashboard provides valuable insights into sales performance, outlet efficiency, product categories, and customer preferences. By focusing on high-performing products and improving weaker areas, the business can increase revenue, optimize inventory, and enhance overall profitability.
